**Summary**  
Rexade™ Arylex™ Active is to be submitted for registration in 2016. It contains the new auxinic (Group I) herbicide, Arylex (common name halauxifen-methyl), and pyroxsulam, a Group B herbicide with grass and broadleaf activity. Arylex controls a range of broadleaf weeds, including some not controlled by pyroxsulam e.g. fumitory (*Fumaria* spp.). Rexade can be tank mixed with a range of broadleaf herbicides to provide broad spectrum control or suppression of important grass and broadleaf weeds in wheat and triticale. This paper summarises field studies addressing selectivity, efficacy and rotational intervals to sensitive crops.

**Keywords**  
Rexade™, Arylex™, Active, broadleaf weed control, winter cereals.
